The sequence is that encoding an Ms45 male tissue-preferred regulatory region. It may be used in the construction of a vector for a method of producing exogenous genes in a male tissue- preferred manner, which is useful in restoring or conferring fertility, such as in hybrid seed production. In conferring fertility, a monocot/dicot plant is transformed with the exogenous nucleotide sequence (a male sterility gene, preferably Ms45), which encodes a product selected from auxins, rolB and diptheria toxin. Hybrid seeds are produced by cross-pollinating maize male fertile

and infertile plants

New nucleic acid encoding a Ms45 male tissue-preferred regulatory region - useful in mediating plant fertility, especially hybrid seed production.

                                            The sequence is that encoding an Ms45 male tissue-preferred regulatory region. It may be used in the construction of a vector for a method of producing exogenous genes in a male tissue- preferred manner, which is useful in restoring or conferring fertility, such as in hybrid seed production. In conferring fertility, a monocot/dicot plant is transformed with the exogenous nucleotide sequence (a male sterility gene, preferably Ms45) which encodes a product selected from auxins, rolls and diptheria toxin. Hybrid seeds are produced by cross-pollinating malze male fertile and infertile plants

                                                                     The invention provides a male tissue-preferred regulatory region (I) comprising nucleotide sequences essential for initiating transcription the MS45 gene. A method of mediating male fertility in a plant is provided that involves introducing an expression vector comprising a promoter operably linked to (I) into a plant where the exogenous gene impacts male fertility of the plant and (I) controls expression of the exogenous gene. A method of producing hybrid seeds is also provided. The present sequence represents a nucleic acid sequence encoding an Ms45 martissue preferred regulatory region from Z. mays
                                                                                                                                                                                                                     A male tissue-preferred regulatory region comprising nucleotide se essential for initiating transcription of the MS45 gene useful for mediating fertility in a male plant.

A method of mediating male fertility in a plant is provided that involves introducing an expression vector comprising a promoter operably linked to (I) into a plant where the exogenous gene impacts male fertility of the plant and (I) controls expression of the exogenous gene. A method of producing hybrid seeds is also provided. The present sequence represents a nucleic acid sequence encoding an Ms45 martissue preferred regulatory region from Z. mays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A male tissue-preferred regulatory region comprising nucleotide seresential for initiating transcription of the MS45 gene useful for mediating fertility in a male plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1394

                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides a male tissue-preferred regulatory region (I) comprising nuclectide sequences essential for initiating transcription the M945 gene. A method of mediating male fertility in a plant is provided that involves introducing an expression vector comprising a promoter operably linked to (I) into a plant where the exogenous gene impacts male fertility of the plant and (I) controls expression of the exogenous gene. A method of producing hybrid seeds is also provided. The present sequence represents a Z. mays M845 promoter fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A male tissue-preferred regulatory region essential for initiating transcription of mediating fertility in a male plant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention provides a male tissue-preferred regulatory region (I) comprising nucleotide sequences essential for initiating transcription of the MS45 gene. A method of mediating male fertility in a plant is provided that involves introducing an expression vector comprising a promoter operably linked to (I) into a plant where the exogenous gene impacts male fertility of the plant and (I) controls expression of the exogenous gene. A method of producing hybrid seeds is also provided. The presents sequence represents a DNA fragment as the provided supstream of the present sequence represents a DNA fragment as the provided supstream of the present sequence represents a DNA fragment as the provided supstream of the present sequence represents a DNA fragment as the provided supstream of the present sequence represents a DNA fragment as the provided supstream of the present sequence represents a DNA fragment as the provided supstream of the present sequence represents a DNA fragment as the provided supstream of the provided supstream of the presents and the provided supstream of the provided supstream of the presents and the provided supstream of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26799) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 883

Further disclosed is an antibody that binds to the polypeptide of the invention. The activity of the polypeptide of the invention may be described as cyrostatkic. The antibody is useful for detecting the presence of (I) in a sample. Nucleic acid molecules of the invention are useful in the detection of breast tumours. (I) is useful as a marker for breast cancer and in breast cancer therapy. Sequences given in records ACN78851-ACN92914 represent nucleic acid markers associated with breast cancer. Note: The sequence listing does not form part of the specification but may be obtained in electronic format from the USPTO web

Also CC described: (1) a vector comprising the polynucleotide; (3) transforming a cell with the polynucleotide; (3) transforming a cell by CC transforming a cell with the polynucleotide; (4) a cell comprising the recombinant DNA construct; (5) producing a plant comprising transforming to a plant cell; (6) a plant comprising the recombinant DNA construct; (7) a seed comprising the recombinant DNA construct; (7) a seed comprising the recombinant DNA construct; (8) an CC construct; (7) a seed comprising a first nucleotide sequence contains at least 30 nucleotides, where the first nucleotide sequence is comprised by another polynucleotide, where the other polynucleotide includes the second, third, fourth, fifth or construct polynucleotide includes the second, third, fourth, fifth or construct polynucleotide includes the second, third, fourth, fifth or consider polynucleotide includes the second, third, fourth, fifth or construct containing a recombinant DNA construct comprising the polypoptide from a cell containing a recombinant DNA construct comprising the polypoptide from a cell containing a recombinant DNA construct comprising the polypoptide from a cell containing a recombinant DNA construct comprising the polypoptide from a cell containing a recombinant DNA construct comprising the polypoptide from a cell containing a polypoptide comprising the polymocleotide sequence. The polynucleotides are useful for floral development, e.g. engineering plant sterility/fertility, cell construct comprision to enhance cell construct construct comprision to enhance cell construct constru

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents the P-Ztap promoter of maize. It is used to in the method of the invention. The specification describes a method for the production of male sterile plants. The method comprises selective expression of DNA encoding a protein that causes tolerance to glyphosate and application of glyphosate. The method uses two DNA molecules, each coperably linked to a separate promoter, whereby the first promoter functions in plant cells to produce a protein that causes tolerance to glyphosate, and the second promoter functions in plant cells to cause the groduction of a second RNA sequence in a male reproductive tissue. Expression of the DNA promotes tolerance to glyphosate in those tissues in which it is expressed. Expression of the second DNA molecule. By using a gromoter for the second DNA molecule which can inhibit the glyphosate tolerance generated by expression of the first DNA molecule. By using a gromoter for the second DNA molecule which restricts the production of the matisense RNA to only a subset of the tissues which express the first CNA molecule, only the subset of the tissues in which the second DNA molecule is expressed will be susceptible to glyphosate toxicity. In this way, a specific cell type or combination of cell types, depending upon the CC glyphosate to the plant. The methods can be used for producing malecule which restricts by application of cell types, depending the first constants crop outcrossing, and for lengthening flower life. The methods can be used with plants such as corn, wheat, rice, canola, oat, can be selectively allated by application of cell types, alfalfa, carrot, cotton, oilseed rape, sugarbeet, canola, oat, can be selectively allated, oilseed rape, sugarbeet, cotton, oilseed, oilseed rape, sugarbeet, cotton, oilseed, oilseed rape, sugarbeet, cotton, oilseed, oilseed rape, sugarbeet, cotton, oilseed rape, sugarbeet.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

CC This is the nucleotide sequence of the maize gene dull1 (dul). To CC illustrate the role of the dul locus in starch biosynthesis, a transposon CC tagging strategy was used to isolate the gene and describe its CC Mu transposon, cloning and characterisation of a portion of the dul locus with CM u transposon, cloning and characterisation of a portion of the gene, and CC isolation a near full-length cDNA (the present sequence). The amino acid CC sequence (see AAY0619) deduced from this cDNA indicates that Dul codes CC for a 186 kDa protein extremely similar to potato tuber starch synthase CC for a 186 kDa protein extremely similar to potato tuber starch synthase CC endosperm. The Dul product contains unique sequence features in its N-CC terminus that may mediate direct interactions with other starch biosynthetic enzymes. Mutations within the maize SSII gene affect CC multiple aspects of starch biogenesis by disrupting an enzyme complex CC containing starch synthase(s). The isolated cDNA can be used to provide an enzyme with which to regulate the production of starch, and with which to regulate the production of starch, and with which to produce altered or novel forms of starch, e.g. in transgenic plants. CC production. Claimed expression vectors comprise the cDNA or fragments of it that code for functional portions of DUI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  묽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                               as compared to plants producing native starch or starch produced with native starch synthases. Expression of the starch synthase fusion proteins along with granule bound starch synthase (GBSS) will lead to a modified starch having an altered or improved morphology, retrogradation, waterbinding, or swelling potential of the granules, gel strength, adhesiveness, cohesiveness, hardness, elasticity, increased or decreased granule size, degree of branching, crystallinity, degree of cross-linking, and increased or decreased glucan chain lengths. This sequence
                                                                                                                                                                                                                                                                                                                              The invention describes an isolated DNA molecule encoding a fusion protein consisting of 4 different functional domains selected from glucan association domain (GLASS), linker domain (LINKR), glucosyl transferase domain (GLYTR), and C-terminal end (CTEND) which are operably linked to one another. The DNA molecule is useful for expressing in plants polypeptides including starch synthase enzymes as fusion proteins with improved affinity to starch and modified catalytic capabilities and to the in vivo and in vitro synthesis of glucan chains of modified lengths
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New DNA encoding fusion protein consisting of 4 different functional domains selected from glucan association domain, linker domain, gluctransferase domain, and C-terminal end, useful for producing modifie
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Starch; starch bynchese domain; Ghylk; c-ccm.....

                                                                                                                                                                         The present invention relates to the isolation of a maize gene, dull 1 (DUI), and the polypeptide it encodes. The DUI polypeptide has starch synthase activity, and comprises an N-terminal arm region, a C-terminal catalytic region, and a region of about 900 amino acids terminating with the catalytic region. The C-terminal catalytic region has a catalytic domain comprising alpha-1,4-glycosyltransferase catalytic activity. The dul polymucleotide sequence is useful in producing starch e.g. from a transgenic plant or transfected cell. The present sequence encodes maize

                                                                                                            CC ; (1) a transformed cell having a nucleic acid comprising an LMFD nucleic cacid linked to a promoter and a 3, non-translated sequence that CC functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3, end of the mRNA molecule; and CC (2) determining a level or pattern of a molecule in a bovine cell or ctissue comprising: (a) incubating a marker nucleic acid (comprising any CC tissue comprising: (a) incubating a marker nucleic acid (comprising any CC complementary nucleic acid molecule obtained from the bovine cell or CC tissue, where hybridisation between the marker nucleic acid and the CC complementary nucleic acid molecule obtained from the bovine cell or CC tissue, where hybridisation between the marker nucleic acid and the CC complementary nucleic acid mentary nucleic acid is predictive of the complementary nucleic acid is used for CC the detection of the complementary nucleic acid is used for CC telegraphy or pattern of the molecule. The LMFD nucleic acid is used for CC determining a level or pattern of a molecule in a bovine cell or tissue. CC is useful for genome mapping, gene identification and analysis, cattle breading, preparation of constructs for use in cattle gene expression, or CC for genetically improving cattle. The present sequence is one of the CC present sequence acid in the constructs of the constructs acides. Note: The constructs acides acides acides acides in the constructs of the constructs acides. Note: The constructs acides acides acides acides in the constructs of the constructs acides acides acides acides in the constructs of the constructs acides acides. Note: The constructs acides 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences, appearing as ABX34836-ABX4947, or complements of them. Also included are appearing as ABX34836-ABX4947, or complements of them.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid associated with lactation, and muscle and deposition, useful for genome mapping, gene identification cattle breeding, or for genetically improving cattle.
                                                                    present sequence was not shown in the specification electronic format from the USPTO web site:

                  The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or resemble for the polypeptides have various to the polypeptides are useful in the diagnosis and/or resemble for the polypeptides where the polypeptides are useful in the diagnosis and/or resemble for the polypeptides and may be useful in the diagnosis and/or resemble the polypeptides are useful in the diagnosis and/or resemble the polypeptides and may be useful to the diagnosis and/or resemble the polypeptides and may be useful to the diagnosis and/or resemble the polypeptides are useful to the diagnosis and/or resemble the polypeptides are useful to the diagnosis and/or resemble the polypeptides are useful to the diagnosis and/or resemble the polypeptides and polypeptides are useful to the diagnosis and/or resemble the polypeptides are useful to the diagnosis and/or resemble the polypeptides are useful to the polypeptides are useful 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation; ss.
                                                                                                                                                                                                                                                                                                                            Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            28-FEB-2000; 2000US-00515126

Sequence 1, Application US/09004056A

Patent No. 6566586

GENERAL INFORMATION:
APPLICANT: Calgene LLC
ITILE OF INVENTION: Plant Expansin Promoter Sequences
FILE REFERENCE: 125
CURRENT APPLICATION NUMBER: US/09/004,056A
CURRENT ETLING DATE: 1998-01-07
EARLIER APPLICATION NUMBER: 60034914
UNMBER OF SEQ ID NOS: 1
SOFTWARE: Patentin Ver: 2.0
SEQ ID NO 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
